

## S U M M E R      B U L L E T I N

ON THE HILL SPECIAL GET-TO-GETHER Tuesday eve. Aug. <sup>12</sup> 13/75

You are invited to appear on the site of VE3OSH for the Annual gathering on the hill. We missed it last year but if the weather is good bring your telescopes, binoculars etc.

We will give you a guided tour of the facilities at OSH and answer any questions you may have of a technical nature or operational procedures. This is your chance to find out the mysteries of repeater operation and find out why the machine decides to quit listening at certain times.

NOTES

Gary Heagle has passed the code and theory exam and is now a full-fledged ham - another of the last class graduates. Norm VE3FGH is one of the growing number with the KDK-144 and joins VE3RP, ATT, SJ, AZV, FGL and who knows there may be some we have missed. George Davis, VE3BBW writes about it in the current issue of THE ONTARIO AMATEUR. Rae, 3RP says they have a phenomenal sensitivity on receive. Ted, 3AER was down to see Rae and was surprised to hear U.S. stations coming in without a multi-element beam.

DIRECTIONS      to OSH SITE

Drive up Simcoe Street to Raglan and continue under the subway and up the hill. Turn right at the crest and continue going east for about two miles and turn right up the hill to the repeater site. The antenna will be visible when you near the road. There are several dips in the road and it is just past a farm on your right.
